Pending kernel upgrade!
Running kernel version:
6.8.0-146-generic
Diagnostics:
The currently running kernel version is not the expected kernel version 6.8.0-147-generic.
Restarting the system to load the new kernel will not be handled automatically, so you should consider rebooting.
The processor microcode seems to be up-to-date.
Restarting services...
Service restarts being deferred:
/etc/needrestart/restart.d/dbus.service
systemctl restart systemd-logind.service
systemctl restart unattended-upgrades.service
systemctl restart wpa_supplicant.service
No containers need to be restarted.
User sessions running outdated binaries:
draken @ session #2: login[1211]
draken @ user manager service: systemd[1206]
No VM guests are running outdated hypervisor (qemu) binaries on this host.

Managing Tomcat
For security, access to the manager webapp is restricted. Users are defined in:
$CATALINA_HOME/conf/tomcat-users.xml
In Tomcat 10.1 access to the manager application is split between different users.
