1. A DEVELOPMENT PROJECT - Mixed tense gap fill

Complete the text with the correct form of the verbs in brackets.

Our development team usually 1. works (work) on several projects at the same time, but this month we 2. are focusing (focus) on a new website for an online clothing company. We 3. started (start) the project six weeks ago and, since then, we 4. have completed (complete) most of the front-end. We 5. have been working (work) on the back-end for the last two weeks, and at the moment two developers 6. are creating (create) the user authentication system.

Yesterday, however, we 7. had (have) a serious problem. While one of the developers 8. was testing (test) the registration form, the application suddenly 9. stopped (stop) responding. We discovered that someone 10. had changed (change) an important configuration file earlier that morning. Fortunately, our system administrator 11. had already created (already / create) a backup, so we restored the previous version.

Today everything is working normally again and we 12. have just finished (just / finish) another complete test. Tomorrow morning, we 13. are meeting (meet) the client at 10:00, as arranged. This time next week, we 14. will be testing (test) the final version of the website. I think the client 15. will like (like) the new design and, by the end of the month, we 16. will have completed (complete) the whole project.

DEBUGGING / PROJECT TIMELINE

2. FIND THE BUG - Grammar debugging

Each sentence contains one tense mistake. Find it and correct it.
